

For one of our customers we are looking for an experienced

Electrical/Power Electronics Engineer

System and Compressor

The Company

Emerson Climate Technologies is a world leader in the production of compressors, condensing units and controls for heating, air-conditioning and refrigeration applications. As part of Emerson, we employ 18,500 people worldwide and achieve a turnover of US\$ 3,6 billion. Emerson is a global manufacturer selling high-quality products, systems and services in more than 150 countries. Emerson Climate Technologies Europe operates 4 plants and 11 sales offices that serve customers in Europe, Middle East and export markets

Location

Welkenraedt (Belgium) close to Aachen (Germany)

The position

- Support directly key OEM's in their current and future projects
- Support Engineering and customers' R&D projects (new products development, field studies)
- Liaise with Engineering for special testing and with Marketing for technical feedback from Sales
- Establish and update Technical Notices and Application Guidelines for related products

The requirements

- Engineering degree in Electrical or Power Electronics or Electronics with experience in HVAC or Refrigeration **or** Controls and Compressors **or** Heat Pumps
- Excellent communication, listening and problem solving skills as well as flexibility
- Outstanding analytical skills and good knowledge of MS Office
- Fluency in spoken and written English is a must, plus other European language(s)
- Willing to travel

The offer

A high level technical position at a corporate level with a competitive package in an international environment.
